# Camp gets green water treatment

A new camp designed to house 1,700 contract and mine workers was recently completed in the Botswana Kalahari town of Jwaneng where the world's richest diamond mine is located.

WESU ecofriendly water treatment system was selected as the preferred technology to treat the entire water supply to the camp.

Hard, scaling borehole water with TDS levels exceeding 1,800ppm is the only supply source available to the town and camp.

WESU provides the right answer to the frequently blocked pipes, geysers and solar panels.

- **Fast return on investment.**
- **Preventing scale.**
- **Disinfecting.**
- **Protecting the environment..**
- **No hazardous chemicals added.**
- **Saving water & energy.**
- **Remotely monitored 24/7.**
